SUMMARY

Full stack developer with 4+ years of professional experience. Since 2024 at GivU, a Mexican recommerce platform for phones, I maintain and evolve the Node.js backend and the admin dashboards, and connect the system to external services (WhatsApp and SMS, shipping, a WordPress store, AI image evaluation). Before that, I spent two years as a front-end developer using Vue on a medical-emergency management system.

EXPERIENCE

Full Stack Developer · GivU — May 2024 – present · Remote, Mexico

Mexican recommerce platform to sell, trade and buy phones.

- Maintain and evolve the backend (Node.js, Koa, Knex, PostgreSQL), the GivU App admin dashboard (Vue) and the GivU Pro dashboard (Next.js), a device-diagnostics tool for businesses.
- Integrated external services: shipping with DHL and EnvíoClick (labels, tracking and user notifications), WhatsApp and SMS with Twilio (notifications and verification), and the WordPress store (WooCommerce).
- Maintain the service that evaluates device photos with AI and returns a score, and added cosmetic photo scanning to GivU Pro.
- Built product features: partner price lists and down payments, offer expiry in business days, lead tracking with filters and Excel export, and notifications and emails in Spanish and English.
- On GivU Pro (Go API and Next.js dashboard, since August 2026, AI-assisted): device photos via signed URLs, signed transfer-of-ownership letter, per-company customer fields, detection of diagnostics from the same customer, and results sent by email.
- Maintain and improve the pricing script (Node.js) that queries Mercado Libre, Amazon, Walmart and Elektra to compute market prices for about 400 phone models, which feed GivU's pricing algorithm.
- Prepare production releases, including database migrations.

Front-end Developer · Penta Security Solutions — Jul 2022 – May 2024 · Argentina

Software consultancy. Worked assigned to Acudir Emergencias Médicas (Buenos Aires), on the company's all-in-one management system: doctors, ambulances and fleets, appointments, equipment, virtual consultations, emergency calls, accounting and payroll. Git and pull request workflow on Azure DevOps, with Scrum and Kanban depending on the season.

- Built improvements across several modules of the system in Vue (Vuex, Vuetify), such as new fields and showing them on other screens.
- Fixed bugs and improved features already in use, including legacy screens in Razor views (.cshtml) that coexisted with the new Vue ones.
- Consumed the back-end APIs and coordinated with that team on the changes the front-end needed.

Freelance Front-end Developer · Independent — Feb 2021 – Jul 2022 · Argentina

- Responsive implementation of blockchain project websites with Nuxt.js, React, Sass and Vuetify.

PROJECTS

Mostrador Online — 2026 · mostradoronline.com.ar

Personal project · in validation. Multi-tenant platform where shops in Corrientes publish their catalog and receive orders through WhatsApp. Each business has a dashboard (products with photos, opening hours, orders, stats, Excel import, bulk price increases) and a public SEO page. Next.js, React, TypeScript, Tailwind, Supabase, Postgres (RLS, Drizzle), Cloudflare R2.

SKILLS

Front-end: Vue, Vuex, Vuetify, React, Next.js, TypeScript, JavaScript, Tailwind CSS, Sass, HTML, CSS.

Back-end: Node.js, Koa, PostgreSQL, Knex, REST APIs, cron jobs, email sending.

Integrations: Twilio (WhatsApp and SMS), DHL, EnvíoClick, WordPress / WooCommerce, OpenAI, AWS S3, Cloudflare R2.

Tools: Git, GitHub, Azure DevOps, Docker, pnpm, Claude Code.

Familiar with: n8n (basic automations).

EDUCATION

Platzi, Web Development (2021). Self-taught since then.
